S-5644

AMENDMENTS TO THE SPECIFICATION:

Please replace the following numbered paragraphs with the following rewritten paragraphs:

[30] The differential assemblies 42a, 42b provides for selective relative rotation between the sections 30a, 30b. That is, differential assembly 42a, ~~43b~~ 42b selectively advances or retards, the first mass gear 44a, 44b and the second mass gear 46a, 46b relative the output shaft 34. The differential assembly 42a, 42b advances or retards the phase of the mass gears 44a, 46a on section 30a relative the mass gears 44b, 46b on section 30b. The relative difference between the sections 30a, 30b thereby provide a variation in magnitude between zero (180 degrees out of phase) to the maximum vibratory force (in phase).
